

SelectIPSM/PrimeIPSM

Expand supplier choices and gain new business opportunities

Arbinet's Data Exchange is a simple, cost-effective solution for managing supplier relationships, streamlining operations and expanding network connectivity.

Arbinet provides a direct connection to IP backbones, suppliers and peers. Reach many networks with one connection, one contract, one network support center and one consolidated billing statement.

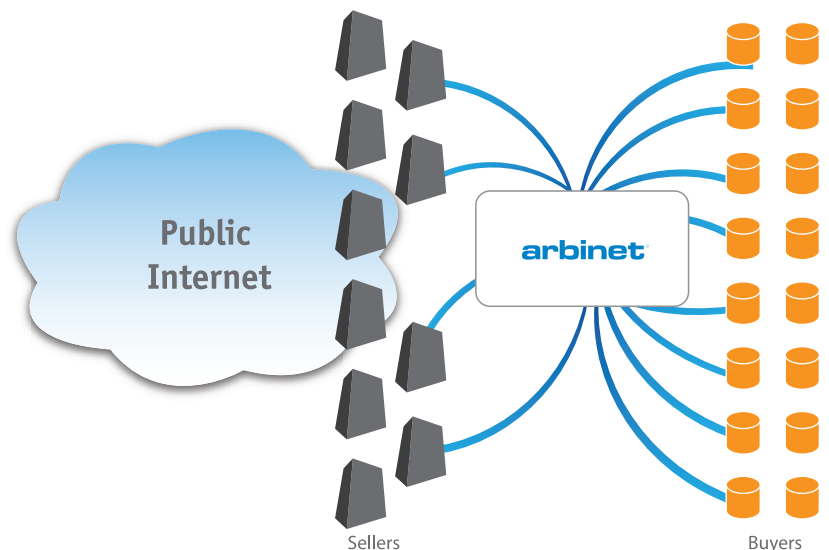

Reduce Costs and Grow Revenue

By managing paid peering agreements and IP multi-homing through Arbinet, ISPs can buy data communications capacity directly from suppliers at competitive wholesale rates without minimum capacity commitments.

Members can also sell their unique on-net routes to other buyers on the exchange, generating additional revenue and subsidizing transit costs on the same connection.

Key Benefits

- Connect seamlessly to multiple IP backbones, suppliers and peers
- Simplify ISP network extension and multi-homing
- Avoid costly over-commitment on IP bandwidth
- Appear well connected to end customers and enhance network credibility
- Reduce operational costs to buy, deploy and manage a router in a remote data center
- Decrease financial risks associated with multiple supplier contracts

More than 20 major IP backbones via a single connection

Simplified Accounting and Settlement

Arbinet simplifies invoicing and settlement with a consolidated billing statement for multiple supplier relationships.

Common trading terms allow buyers and sellers to participate on equal footing. A neutral, third-party order entry system helps to eliminate disputes, while Arbinet's credit management system guarantees payment.

Layer2 IP Exchange Service

Arbinet's Layer2 Full Exchange Service provides simultaneous access for transit and paid peering with more than 20 major IP backbones via a single connection, without an Arbinet AS hop. Members can also opt in for free peering with other Members connected on the same exchange locations.

Prime IP

PrimeIP provides full internet access via a single connection. Buyers evaluate offers based on price and independently-measured quality, with the ability to access multiple ISPs via multiple BGP sessions for redundancy.

SelectIP

SelectIP is a paid peering solution enabling buyers to purchase specific on-net routes from any qualified seller via a single connection. SelectIP provides performance enhancements by eliminating the hop through a transit provider.

“Arbinet's services allow us to efficiently connect with many different US providers on the same port.”

Tmnet

Flexible Billing Options and Terms

Buyers and sellers have the flexibility to agree to trading terms ranging from one to twelve months and choose billing options that include 95th percentile or GBytes transferred with no capacity minimums necessary.
