

Arbinet theexchange™

The global marketplace for trading voice traffic

Managing traffic flows to multiple suppliers and numerous global termination points can be costly and time consuming. Contract negotiations are lengthy and the back office processes to handle thousands of codes, to efficiently route traffic and to settle payables and receivables are complex and costly. Traditional international wholesale processes may result in increased capital expense, high operational and administrative costs and significant financial risk from credit default.

Reach Multiple Global Destinations via a Single Interconnect

Arbinet's theexchange simplifies global voice traffic management. theexchange is an anonymous marketplace where customers and suppliers trade, route, manage and settle voice traffic. By using Arbinet's web-based voice on theexchange platform, carriers can buy and sell over 1400 worldwide destinations and connect with Arbinet's 1100+ members via a single interconnect. theexchange's anonymous environment lets all members trade fairly and equally, regardless of size.

Increase Profitability

theexchange enables customers and suppliers to increase network utilization, achieve better pricing and improve profitability and cash flow by reducing the number of interconnections, streamlining legal, billing and collection expenses and virtually eliminating disputes and bad debt.

Key Features

- Single VoIP or TDM connection
- Real time ASR, ACD and Call Volume statistics
- Route plans updated every four hours based on quality and price changes
- Dedicated Network Operations Center (NOC) available 24-hours, 7-days a week
- Secured 15 day payment and settlement cycle, with shorter options available
- CreditWatchSM automated credit management provides real-time balance on trading account with third-party underwriting by leading third party underwriters
- Access to Arbinet's Marketview, an online tool that enables Members to see up to date market information on prices, quality and codes
- Use of Average Call Duration (ACD) and/or Answer Seizure Ratio (ASR) as matching criteria

- Automated credit management system that protects sellers and eliminates financial risk
- Quality and rate matching that simplifies route management
- Seamless VoIP/ TDM conversion eliminates compatibility issues
- Knowledgeable Account Development Specialists help maximize trading opportunities

Seamless VoIP/ TDM conversion eliminates compatibility issues

Reduce Financial Risk

Arbinet's CreditWatchSM credit management system is backed by third party underwriting that protects sellers and guarantees fast, reliable payment. Arbinet provides a secure, 15-day settlement cycle with shorter options available.

Intelligent Routing for Better Quality and Pricing

Arbinet's patented, intelligent routing technology improves quality and reduces costs. Advanced routing services such as Global Number Portability Correction and Peering, efficiently route traffic in real time on a call-by-call basis to the actual terminating carrier.

Buying on the exchange

Buying on the exchange is easy. Buyers develop customized routing plans by accessing real-time market price and quality data on the Arbinet platform, selecting destinations and specifying

rate and quality requirements in buy orders. The platform automatically matches the buy orders to qualifying suppliers and traffic flows. Routing options include prioritization by rate or quality.

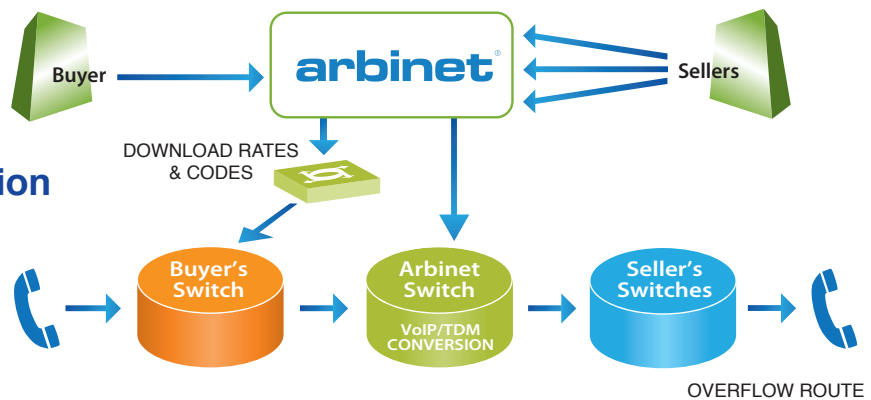

A Turnkey Sales Channel to the World

Immediately generate revenue by selling routes on Arbinet's 1100 member voice exchange. Simply select your destination and specify your price. Sellers that consistently provide high quality routes can upgrade to "Select Seller" status and qualify for inclusion in Arbinet's Carrier Services routing tables.

Fast, Secure Payment

Arbinet's CreditWatchSM credit management system protects sellers and guarantees fast, reliable payment and reduce working capital costs. Payment terms are 15 net 15, with optional accelerated settlement services as fast as 3 net 1.
